Inhabited houses

The district consists of 11 parishes viz: —
Cann, Coaley, Dursley, Kingswood North Nibley,
Nymphfield, Crulpet, Slimbridge, Stinchcombe
Uley and Watton. Under Edge.

Inspector of nuisances Mr J Robinson Silver St—
Dursley.

To the Chairman and members of the Dursley
Rural District Council.

Gentlemen,

The rural district of Dursley is situated
on the sides and buttresses of the Western
Cotswolds which consist largely of the white
lime stone. Many of the houses are built upon
the hill sides, or on the abutments which run out
to different distances into the valley of the Severn.
Slimbridge is the only parish wholly situated in
the valley; so that for the most part the
district is naturally well drained.
The chief streams which drain the district are the
Cann, which drains Uley Dursley and Cann and
receives a part of the drainage of Coaley.

empties itself into the Berkeley and Gloucester Canal.

The Ribley Brook which drains Holt Ribley empties itself into the Matford Brook. The Dyer's Brook and Alderly Brook which unite at Kingswood, these drain Wotton & Edge and Kingswood, and join the Wickwar Brook.

The Wickwar Brook is a boundary between the Dursley Rural District and the Chipping Sodbury and Thornbury Rural District. None of these streams are used for drinking purposes by human beings.

The water supply of the district is as follows:—
Wotton Under Edge has now possessed its own water supply within a certain area since October 8th 1894. This is collected on land belonging to Lord Fitzhardinge called Hamley's Crake and conveyed to a reservoir on the side of Coombe Hill and thence distributed to the town. This has since been extended to Bradley Green. There was a scarcity of water during the dry part of the summer in the upper part of the town. There is also "The Row" & "Old Town". The outskirts of the parish are supplied by springs, dipwells and taps & cisterns. The village of Kingswood has its own water supply the source of which is on the side of the hill facing Wotton Under Edge. Coaley also has a water supply, this is from Spring Tynning. The outskirts by dipwells. All these supplies are under the control of your Board. All the remaining parishes are supplied by springs and deep or shallow wells, and some of these are not satisfactory.

Many of the inhabitants in Dursley are supplied by wells on their premises, but on the higher parts of the town, and also for the workhouse the water has to be fetched from the Broadwell, which is a copious stream of water near the centre of the town. For some time past various schemes have been suggested for supplying Dursley with water, but all are in obedience as yet, except what has been pushed on by private enterprise, and there is a fair promise of supply to the upper parts of the town shortly.

During the year water has been laid on to Rowley Cane, a tank capable of holding 600 gallons of water has been laid in a position to catch a spring near the Cloth Mills this is conducted in pipes to a stand pipe near the Post Office, and carried on to the end of Rowley, where there is also another stand pipe placed. (a stand pipe was placed years ago opposite the Post Office by the late Mr. Winterbotham, a small tank being supplied by the same spring) so that what the parish Council with your permission has done has been to enlarge and extend the former supply.

At present there appears to be plenty of water. In Upper Cane Lord Fitzhardinge has laid on water to one of his farms from a spring by the way side. But he has first built a cistern and placed a lap - and carried on a branch from the pipes to his farm down into Upper Cane, much nearer the cottages by the church, where it discharges by a pipe.

The
Sewage
Sewers

The sewage of Dursley is partly water borne, partly collected in dry earth closets, and partly in the old fashioned privy vaults. The water borne enters the stream called the Cam.

One of the sewers empties itself into the Broadwell stream, this passes through a mill which is a very unsatisfactory state of things. This I have before pointed out ought to be taken out of the stream, and carried to the bottom of the town. The sewers are for the most part very defective being built of loose stone. The scavenging is done once a week when the dry earth closets are emptied. The sewage of Wotton. E. Edge is partly water borne but only to a small extent. Most of the sewers of Wotton. E. Edge are built of loose stone. All empty into the Dyer's Brook. Dry earth closets being by far the most common method of collecting it. The scavenging is done once a week. The other parishes have no proper sewers. The commonest method of collecting the sewage is by the privy vault which is often very large and most unhealthy. Many bad throats have their origin in foul privies. I firmly believe. Wherever it is possible we advise dry earth closets, or shallow vaults which can and must be emptied frequently.

Inspection
Work.

I have inspected during the year in different parts of the district. Numerous complaints of No. 33. The nuisances consisted of foul privies, pigsties, ditches, gutters, choked drains, sewers &c. Most of the inspections were made with the Inspector of Nuisances who

took them in hand to get them abated.
Housing Under Housing of Working Classes Act Part II
of We inspected an unhealthy dwelling
Working on Sept 10th on the side of Uley & Bury Dale.
classes This was ultimately closed. And on Sept 28th
a cottage at the Quarry Camp. This at the
time I was informed had not been occupied
for 3 months.

Over One case of overcrowding was visited and
crowding inspected by us during the year; the
nuisance did not exist.

Plans Under the Bye Laws, four plans of new
new-buildings were examined and reported
on by us during the year.

New Eleven new dwellings were inspected by us
dwellings during the year.

Factory Under the Factory & workshops Act 1878 to 1895.
workshops We made three inspections

Act Lodging The two common lodging houses in Wotton & Edge
houses were inspected by us in April and again
in October. There is no common lodging house
in Dursley.

Bake-houses The bakehouses and slaughter houses were
inspected by us during the year.

Slaughter-houses Of the bakehouses we inspected 35 and
only obliged to recommend limewashing
in one.

Of the slaughter houses inspected there were
34 all of which we considered satisfactory.

Water I examined fourteen samples of water during
Analysis the year. Of these nine I found usable and
five not usable.

Infectious In addition to the above I made (often with
Diseases the Inspector of Nuisances) eight visits and

There is a great deal of
work to be done in the
country, and it is necessary
to have a large number of
men to do it. The work
is not very difficult, but
it is very hard work, and
it is necessary to have a
large number of men to do
it. The work is not very
difficult, but it is very
hard work, and it is
necessary to have a large
number of men to do it.

inspections of houses and surroundings in which dangerous infectious disease of some kind was present. Those not visited by us were visited by the Inspector alone; which came to our notice and in which a visit was thought to be advisable. Those cases of Dangerous Infectious Disease which caused most trouble during the year were Diphtheria and Typhoid Fever. Diphtheria caused most trouble and expense to the Board. Of this disease there were seven cases in Coaley and Dursley between August 12th and November 10th. The first in order of time and also the second occurred in Coaley. These were more than a mile apart, and there was no connection between the children or families. The third occurred in Dursley, this had no connection with either and the seventh was again an isolated case in Dursley, the third, fourth and sixth caught the disease from the second case. The second, fourth, fifth & sixth cases occurred in the same family and followed each other. All occurring within fifteen days, and all were removed to the Isolation Hospital, The Moors, Coaley. The origin of first in Coaley was doubtful. Of the second case only a foul privy could be found; of the first case in Dursley probable contact with infected persons or things, of the seventh and last case foul exhalation from "The Lip". There were four cases of Typhoid fever. One in Cam parish origin probably a foul privy.

and chestnut, and three in Dunley, first imported, the second possibly some communication with the first, were neighbours the third caught from the second.

The Public Elementary Schools in Upper Cam in January and February for 32 days on account of the same outbreak. The boys & girls schools at Slimbridge and Cambridge were closed for 14 days in February and March on account of an outbreak of Rotheln.

Prosecution There was one prosecution during the year of a land-lord who refused to make the house of a dry earth closet safe and fit for use. It was both dilapidated & dangerous.

Isolation & disinfection In Isolation and disinfection we have the two most powerful means for preventing the spread of Dangerous Infectious Diseases. But to be effectual Isolation must be carried out early in the outbreak, and disinfection thorough in its application.

In September we quickly (after the case came to our knowledge) isolated the family affected by Diphtheria in Coaley, and there was no further spread of the disease. Our knowledge of the case was too late to prevent the infection spreading in the family from the first case. Because about a week elapsed after the first child became ill before medical aid was sought, in that time all the other children had contracted the disease. But Diphtheria is not a disease which

spreads from one family to another with the same degree of infectiveness as small-pox or scarlatina. In the family referred to the Isolation Hospital at the Woods proved of great service and it is to be hoped the Sanitary Authorities will have the wisdom of it until the way is clear to provide something better.

Attendance at Meetings: - I attended twelve meetings of the Rural District Council during the year.

Vital Statistics. In the estimation of the population at all ages living at the middle of July 1897. I have adopted a down-grade scale and that is taking the average rate of decline for the last thirty years before the census year 1891. The loss is 38 per annum, and the estimated population is 11,929. The births exceed the deaths by 115 in 1897 this is called the "Natural Increment." In this district in the past for 20 or 25 years a period both immigration and "Natural Increment" even (if at the same rate as at the present,) were unable to balance the loss to the district by emmigration. The vital statistics for the year are as follows: viz. - There were 292 births registered during the year, there were 18 births less registered during the year than were registered in 1896. Of these 145 were males and 147 females there were 2 more females registered than males. Usually the males preponderate but in 1896 there were 12 more females registered. The Birth rate for 1897 per thousand of estimated population living at all ages at the middle of the year is 24.47 in 1896 it was 25.98.

This is called the crude birth rate and is very low. The birth rate for Gloucestershire was in 1896 about 23.59. For all England and Wales 29.7.

Deaths

The deaths registered during the year were 177 of these 79 were males and 98 were females so that 8 more females deaths were registered during the year than males. The general death rate for the year per thousand estimated population is 14.83 in 1896 it was 16.34. The general death rate for the County of Glos for 1896 was 14.19 for all England and Wales 17.1.

The annual death rate for the different districts are Dursley 14.01 Eley 14.29. Frotton - Under. Eder 15.91.

The deaths arranged according to table (A) at various ages are as follows. Under one year 27. one and under five 17. five and under fifteen 8. fifteen and under twenty-five 4. twenty five and under sixty 47. sixty five and upwards 74. Thirty two lived to between 70 & 80. Eighteen lived to between 80 and 90 and three lived to upwards of 90.

Infant Mortality

The deaths registered under one year were 27 and the rate of Infant Mortality is 92.46 that is the deaths under one year occurring in the year to a 1000 births, in 1896 it was 100, and for the County of Glos it was 105.4 and for all England and Wales 148. The rate of Infant Mortality is lower than last year, and is low compared

Zymotic
Diseases
&
death-
rate.

with all England and Wales in 1896. The rate of Infant Mortality for Wotton-Under-Edge in 1896 was 144 for last year was 61.

The seven principle Zymotic Diseases were the cause of death in twelve persons, seven of these were under five years of age. Two died of Diphtheria, one of Measles, two of whooping cough and two of Diarrhoea. Of the five deaths over 5 years of age, one was from Diphtheria and three from Typhoid. Never one from Measles.

The Zymotic death rate per thousand of estimated population is a trifle over 1 for 1896 it was 91 for 1895 66. For the County of Glo in 1896 it was 41 for all England & Wales 278.

Two deaths were registered in the Wotton-Under-Edge district - from membranous Croup. But no death from Diphtheria. There was no death registered in the district from small pox Scarlatina, Typhus, Continued Relapsing or Puerperal fever, from Cholera or Erysipelas. There was one death from Rheumatic fever and two from Influenza.

There were 38 deaths from the Acute Respiratory Diseases and the death rate per thousand of estimated population is 378 the death rate in 1896 was 25. There were 14 deaths from Phthisis. Thirteen from Heart Disease. Four from Injuries, and four from Cancer, registered in the district during the year.

(At the request of the Glo. County Council Cancer is put in a separate column in Table A as is also Influenza).

The Compulsory Notification of Dangerous Infections

Disease is not in force in this district.

In June 4th a motion was brought forward urging the adoption of the Act; but when put to the meeting 4 members of the Council voted for, 6 against. One and the chairman not voting.

Table
B.

The Act not being in force the contents of Table "B" are very defective. The only available source being the ^{District} Medical Officers Relief Books. Other sources are not satisfactory. It contains the following information that there were six cases of scarlatina, seven of Diphtheria four of Typhoid fever, One of continued fever. Three of Erysipelas and fourteen of Influenza.

Under Daily Cowsheds & Milkshops Order 1886-
We made two inspections re the water supply. One a polluted well we got remedied in the parish of North Hibley, the other no water supply at Lumpy Green Slimbridge was in hand at the end of the year.

Prospective: A writer in the Journal of State Medicine for this month remarks "Hygiene is a progressive science, and what may have been regarded as satisfactory twenty years ago may be looked upon very differently now. Even a few years ago the importance of protecting springs had not been fully realized."

So the memorandum of the Local Government Board of December 1894 finds for this year, work to be done in that direction.

The Compulsory Notification of Dangerous Infectious Diseases Act is yet waiting to be adopted.

The Dursley water supply is not so pressing just now on account of that which is undertaken by private enterprise. New & better provision for the Isolation of two or more Dangerous Infectious Diseases is not an exhausted subject at present.

Appended is the annual report of work done by Mr. S. Robinson Inspector of nuisances.

I remain

Your Obedient Servant

Francis Jos. Jones
Medical Officer of Health.

February 24th 1898

Annual Report of the Rural District Council
Abated for the year ending December 31st 1897.

To the Dursley Rural District-Council.

Gentlemen,

I have visited and inspected 82 Registered Dairies and Milkshops in the Eleven Parishes of my district and found them satisfactory. There has not been any infectious disease on either of the premises during the year. There was an outbreak of Diphtheria at a cottage of one of the men working on one of the farms that is registered for milk selling, but he had nothing to do with the milk or milk vessels. There has been 123 nuisances reported & abated and one summons issued.

Dwelling houses.

Overcrowding Abated	6
Decapitated & defective repaired	4
Cleaned and disinfected	10
Water supply provided	2

Chimneys.

New Provided	1
Rebuilt or repaired	11
Cleaned	34

Drains.

New provided	2
Defective remedied	32
Foul ditches cleaned	3

Other Nuisances

Offensive refuse removed	4
Pig nuisances abated	4
Offensive cesspools abated	4
	<u>123</u>

Number of nuisances abated without formal notice

Statutory notices served	41
Summons issued	82
	1
	<u>Total 124</u>

Thomas Robinson
Sanitary Inspector
